

How to populate the 'To' field if the auto-complete doesn't fill it in from your contacts.

The best method is to click the 'To' button in your mail message.

- When your contacts menu opens, find the contact you want, there is a small + sign on the very right side of that list, and click that + sign. Up above, you will then see that contact listed.
- Hit save and your contact menu will close.

-That contact will now be populated into the 'To' field of your mail.
